

14 Apps, One Category, No Consensus

Every competitor jewellery app in the Boisar market, tested live on-device and decompiled – what to copy, what to skip, and where the whole category is leaving room for Aradhana to win.

Device: Redmi Pad Pro 2, over WiFi ADB Method: Live UI walkthrough + jadx decompilation

I App-by-app findings

Each app was launched fresh, walked through home → categories → a product → cart/login, and screenshotted at every step, then its APK was pulled and decompiled for permissions and bundled SDKs.

PLP PRICING

Not shown

CART MODEL

Enquiry / WhatsApp
only

STANDOUT

Store & appointment
icons in header

Clean splash ("Since 1964"), a persistent live gold-rate bar plus one-tap store-locator and appointment icons — always visible, never buried in a menu. Categories tab lists Gold/Diamond/Silver/Platinum/Coins&Bars/Jewellery Purchase Plan/Solitaire/Collections/Gift Store/Offers. PLP has subcategory icons, filters, sort, and quick chips (Bestseller/Quick Delivery/New Drop).

No "Add to Cart" on the product page — the button is "Send Enquiry." Empty-cart state pushes "Get WhatsApp Assistance" as the primary CTA.

VERDICT

Strong trust signals (live rate, heritage, one-tap contact) but the purchase path is a lead-generation funnel, not a transactional checkout. Good for high-trust big-ticket sales; bad for frictionless self-serve buying.

02 • Ornate NX

NOT A CONSUMER APP

com.ornate.nx

RESULT

Throws Error! Could not proceed, please check IP address-port number and server status immediately on launch — a hardcoded local server/IP config. Almost certainly an internal billing/POS or ERP companion app (Ornate is a jewellery ERP vendor), not a customer-facing app.

VERDICT

No live testing possible. Static analysis shows Bluetooth scan/connect permissions, consistent with an in-store barcode scanner or card-terminal companion.

03 • Kalamandir Jewellers

White-label · dsoft

WEAK

com.dsoft.kalamandirjewellers

CART MODEL

None — wishlist only

STANDOUT

Gold SIP as a primary nav tab

Mobile-OTP gate with a working Skip for guest browsing. Home leans hard into gold price-lock schemes ("Suvarna Sankalp: Protect Yourself From Rising Gold Prices," "Monthly Rate Booking — up to 50% Benefits") and a compact multi-metal rate widget you page through. Bottom nav swaps Home/Cart/Wishlist for **My Profile / Wallet / Gold SIP / My Txn / Contact** — this is a savings app wearing a jewellery skin.

Weakest product page in the whole set: no price, no product code, no description beyond metal type, no cart, no enquiry button — just a wishlist heart and a share icon.

VERDICT

Real differentiation on gold-investment tooling, but a shopper has no next action on the product page. Copy the scheme idea, not the bare PDP.

04 • Ratanlal CB Bafna Jewellers

White-label · dsoft

MIXED

com.dsoft.ratanlalcbafnajewellers

Confirmed identical shell to Kalamandir — same login-with-Skip pattern, re-skinned indigo/purple. Bottom nav here is Home/Wallet/**Deals**/My Txn/Contact; home carries four tiles instead of two — **Digital Gold/Silver**, Gold Scheme, E-Gift Card, **Book My Gold**. A Marathi-language marketing banner is a nice regional touch none of the English-only apps bothered with.

VERDICT

Confirms digital-gold-in-small-denominations is a real, repeated feature bet across this vendor's whole client base — not a one-off idea.

05 • Fatehchand Jewellers

White-label · dsoft

MIXED

com.dsoft.fatehchandjewellers

Same dsoft shell, brown/gold skin, same four tiles (Digital Gold / Gold Schemes / E-Gift Card / Book My Gold). Adds an "E-STORE — Click Here" embedded video banner. Bottom nav drops the Deals tab: Home/Wallet/My Txn/Contact.

VERDICT

No new pattern beyond the dsoft baseline — logged for completeness of the family comparison below.

06 • Manisha Jewellers

White-label · dsoft

MIXED

Same shell again, purple skin, but a genuinely different bottom nav: **Map / Offers / Rate Alert / Wishlist / Contact** — no Home, no Wallet/Txn. "Rate Alert" as a first-class center tab is a real differentiator: users set a target gold price and get notified, versus everyone else's passive rate display. Real storefront photography in the hero banner, plus a "Kids Jewellery" category nobody else called out explicitly.

DSOFT-FAMILY SUMMARY

Kalamandir, Ratanlal, Fatehchand and Manisha are the same app shell with different skins and tiles drawn from a shared pool: {Home, Wallet, Deals, My Txn, Contact, Map, Offers, Rate Alert, Wishlist, Gold SIP} × {Digital Gold, Gold Scheme, E-Gift Card, Book My Gold}. None showed prices on PLP/PDP; none had a real cart. Digital Gold + SIP + Rate Alert are the three "financial product" features this whole vendor family bets on.

07 • Joyalukkas

PLP PRICING

Yes, with discounts

CART MODEL

Real cart

STANDOUT

Price Scanner ·
global multi-country

By far the most production-grade app tested — a TWA (wrapped website) that doesn't feel like one, with a smooth animated splash and a full-bleed autoplay hero video. Country selector spans India, UAE, Oman, Qatar, Bahrain, Kuwait, KSA, Singapore, Malaysia, UK — a large international chain, not a regional player. Home carries a ten-item quick-icon row ending in **Bullions**. Bottom nav includes a **Price Scanner** tab — almost certainly scans an in-store tag/barcode to pull up the product in-app, bridging showroom visits with the app.

PLP is genuine full e-commerce: real prices with strikethrough MRP, "40% Off on Making Value" badges, "Showing 12/1993 Designs" pagination, grid/list toggle, sort, filter. A real shopping-bag icon in the header, not just wishlist.

VERDICT

The benchmark to beat: real pricing, real discounts, real cart, global scale, plus differentiators (Price Scanner, Bullions) nobody else in the set has.

08 • GIVA

co.giva.jewellery

Custom build

PLP PRICING

Best-in-class

CART MODEL

Real cart, quick-add

STANDOUT

Delivery date on card
· loyalty coins

A different category of competitor — a modern, silver-first, affordable D2C brand rather than a traditional gold jeweller — but its UX is the strongest benchmark in the entire set regardless of category. Onboarding leans on social proof ("Trusted by 2.5M+ happy customers") and playful microcopy. Home has Gold/Silver/Demifine material tabs, pincode-based delivery, a loyalty-coin balance, occasion-based gifting shortcuts, and a "Crown" loyalty tab.

The PLP is the best of all 14: star ratings, price + strikethrough MRP, **delivery date printed directly on the card**, promo codes pre-computed into a "Get It For ₹X" price, and — uniquely across the whole set — a **quick add-to-cart "+" button right on the card**, no PDP visit required.

VERDICT

Myntra/Nykaa-caliber e-commerce UX applied to jewellery. The interaction patterns — quick-add, inline discount math, delivery-date-on-card, loyalty coins — are what a modern shopper now expects, regardless of price tier.

09 • Chawla Jewellers

com.chawlajewellers

White-label · Right Gold

MIXED

Runs on a second white-label platform, "Right Gold" — a different vendor from dsoft, but a near-identical feature concept: gold-rate ticker, Gold SIP, Wallet, My Txn, Contact nav, Digital Gold/Gift Card/Scheme tiles. Confirms a market-wide pattern: most small/mid-size jewellers license a "jewellery app in a box" platform rather than building custom. Has a cart icon, wishlist heart, and notification bell together in the

header — closer to real e-commerce than the dsoft family. A forward-dated seasonal campaign banner ("RIVAAZ — April 2026") shows CMS-driven event marketing.

VERDICT

Confirms at least two competing white-label vendors serve this market — only the larger/better-funded players (GRT, Joyalukkas, GIVA, Malabar, Tanishq, Bhima Gold) build bespoke apps.

10 • My Bhima

LIKELY STAFF PORTAL

sharaaninfo.mybhima

Hard login wall — no Skip, no guest path. "Welcome Back" requires Mobile Number + Password (not OTP), plus Sign Up / Forgot Password. Branded "BHIMA — Pure Since 1925" but distinct from the separate consumer "Bhima Gold" app also in this set. The mandatory credentialed password login (rather than OTP) points to a staff/franchise/dealer-facing tool, not the public storefront. No account was created to go further — out of scope for a competitive UX review.

VERDICT

Likely not a customer-facing app at all; logged for completeness only.

11 • Jewelflix Pravesh Gold

Custom build

MIXED

com.jewelflix.praveshgold

Onboarding pitches the app as a metal-price tracker first, jewellery store second ("Track the latest metal prices with daily updates"). Home leads with **gold bar/bullion purchase tiles** (0.5g / 1g / 10g) above even the rate cards — the strongest "gold as investment" framing of any app tested. Rate cards carry an exact freshness timestamp ("Updated: 22 August, 09:47 am"), more precise than any competitor's unstamped rate bar. Chat is a first-class bottom-nav tab, not just a floating bubble.

VERDICT

Most aggressive bullion-first positioning in the set — worth a deliberate decision on whether Aradhana wants "gold as investment" or "gold as jewellery" to lead the home screen.

12 • Malabar Gold & Diamonds

Custom build

STRONG

malabargold.qburst.com.malabargold

Celebrity-fronted onboarding, "Sign in / Register Later" guest path. Home leads with a "450+ Showrooms, 14 Countries" trust banner — same scale tier as Joyalukkas — followed by six clean shortcut tiles: Bestsellers, **Live Gold Rate**, Shop in Budget, Diamond Rings, Stunning Earrings, Book a Visit. Simpler bottom nav (Home/Stores/Account/Menu) than most, leaning on a slide-out menu for depth.

VERDICT

Confident scale-driven branding with a clean, shortcut-tile home rather than a busy scheme-heavy one. "Book a Visit" and "Shop in Budget" getting equal billing with browsing is notable.

13 • Tanishq

Custom build

STRONG

com.titancompany.tanishqapp

Premium positioning from the first frame — minimal serif wordmark, moody bridal macro photography. Onboarding calls out a **Ring Size Calculator** ("measure your ring size even without visiting a store") as a hero feature — a concrete utility nobody else marketed.

RISK TO FLAG

Hard OTP login wall with no guest/Skip path found — unlike most of the set. A persistent "How can I help you?" chat bubble sits even on the login screen. As India's largest organized jewellery retailer, Tanishq can likely afford to trade browsing friction for lead quality on brand strength alone.

VERDICT

Not a pattern to copy blindly unless Aradhana has comparable brand pull — a guest-browse option, like most competitors offer, is the safer default.

14 • Bhima Gold

Custom build

BENCHMARK

None — full browsing

PLP PRICING

Yes, with discounts

CART MODEL

Real cart

STANDOUT

Quantified ₹/gram discount cards

No login wall at all — the most frictionless entry of any app tested. Gold-rate ticker sits directly under the header, updating by karat. A festival campaign presents three discount cards with real numbers rather than vague percentages: Gold "Upto ₹1,000 Off per gram," Diamond "0% Making Charges & ₹10,000 Off + free 100mg gold coin on ₹1L value," Silver "Flat ₹1,000 Off on every 50 grams" — the clearest, most quantified discount presentation in the whole set.

VERDICT

Best combination of zero-friction entry and concrete discount messaging. The "₹X off per gram" framing is more persuasive than percentage banners — worth adopting outright.

II What the code says that the UI didn't

Every app's base.apk was pulled over ADB and decompiled with jadx to read permissions and bundled SDKs — surfacing tech choices no amount of tapping would reveal.

Payment gateways: nobody trusts just one

Razorpay is the most common (GIVA, Bhima Gold, Chawla, the whole dsoft family, Jewelflix, Joyalukkas, Tanishq, Malabar). PayU appears in the dsoft family, Chawla, and Joyalukkas. Cashfree and a direct PhonePe SDK show up in GIVA, Bhima Gold/My Bhima, the dsoft family, and Jewelflix. Juspay — an orchestration layer over multiple

payment methods — appears only in GIVA and Tanishq, the two most "modern stack" apps.

TAKEAWAY

Every serious app stacks 2–3 gateways for redundancy and lower decline rates. Plan for at least two from day one.

A hidden feature the UI never surfaced

The entire dsoft family (Kalamandir, Ratanlal, Fatehchand, Manisha) plus Chawla Jewellers bundle the `io.agora.agora_rtc_ng` real-time video SDK, and carry an Android call-notification "Video" answer-action string in their resources. That's strong evidence of a live video-call / virtual-consultation feature that exists in five separate apps but wasn't surfaced anywhere in the visible UI during live testing — probably gated behind login or a specific promo.

TAKEAWAY

Letting a customer video-call a salesperson to see a piece "in hand" before an in-store visit is a genuine trust-building tool for high-value gold/diamond purchases — and if even five competitors built it and buried it, doing it prominently is a real differentiator.

Analytics & marketing stack

Firebase Analytics + Crashlytics is nearly universal. AppsFlyer (install attribution) appears in GIVA, Chawla, the dsoft family, and Tanishq. MoEngage (push/lifecycle marketing) appears only in Joyalukkas and Tanishq — the two most marketing-mature apps. CleverTap appears in GIVA; OneSignal in My Bhima. Facebook's ad-conversion SDK is nearly universal.

Permissions worth flagging

APP	PERMISSION	READ
Tanishq	CALL_PHONE, ACCESS_BACKGROUND_LOCATION, REORDER_TASKS, EXPAND_STATUS_BAR	More invasive than any other app tested. Background location especially should be avoided unless a geofencing feature genuinely needs it — foreground location covers "find nearest store."
Malabar Gold	READ_CALENDAR, WRITE_CALENDAR	Almost certainly so "Book a Visit" can write straight to the user's calendar — a nice small touch.
GIVA, Chawla, dsoft family	READ_CONTACTS	Likely a refer-a-friend or gift-card-to-contact flow. Only worth requesting alongside a concrete, explained feature.
Ornate NX	BLUETOOTH_SCAN, BLUETOOTH_CONNECT	Consistent with a POS/in-store hardware companion (barcode scanner or card terminal), not a customer app.

Three ways this market builds apps

1. **Fully custom builds** — GRT, Joyalukkas, GIVA, Malabar, Tanishq, Bhima Gold, Jewelflix Pravesh Gold. Larger investment, more differentiated UX.
2. **White-label platform "dsoft"** — Kalamandir, Ratanlal CB Bafna, Fatehchand, Manisha. Identical bundled-SDK fingerprint confirms one shared codebase.
3. **White-label platform "Right Gold"** — Chawla Jewellers. A second, distinct vendor selling the same conceptual feature set.

TAKEAWAY

Roughly half this competitive set didn't build a bespoke app at all — a genuinely well-designed, purpose-built Aradhana app stands out against the templated majority on polish alone, without needing Joyalukkas/Tanishq-scale investment.

III Table stakes vs. open ground

What every serious competitor already has, and where the whole category is still leaving room to win.

Table stakes – every serious app already does this

- **Live gold/silver rate on the home screen**, no navigation required — several update by the minute, timestamped. Non-negotiable.
- **Guest browsing with login deferred** — 10 of 14 apps offer a Skip/Later path. Only Tanishq and My Bhima hard-wall it, and Tanishq can afford that on brand strength alone.
- **Store locator + Call Us one tap away**, not buried in a menu.
- **A gold-investment/savings product** — Digital Gold, Gold SIP, or price-lock "Book Now Buy Later" — present in nearly every app except pure-fashion GIVA. Expected, not optional.
- **WhatsApp or in-app chat** as a first-class support channel in the majority of apps.

Where the market is weak – our opening

- **Pricing transparency is inconsistent and often bad.** GRT and the dsoft family show no price on listings; Kalamandir's product page has nothing but a wishlist button. Only Joyalukkas, GIVA, and Bhima Gold show real discount pricing throughout.
- **Almost nobody has quick add-to-cart on the listing grid** — GIVA is the only one. A one-tap "+" removes real friction versus the enquiry-only majority.
- **No app showed AR/virtual try-on** — genuine white space for rings, bangles, and earrings.
- **Delivery-date-on-card and quantified discount math** ("₹1,000 off per gram") are rare and effective; most competitors use vague "up to X% off" banners.
- **A live-video consultation feature exists in 5 of 14 apps but is surfaced nowhere obvious** — doing it prominently, not hidden, is a differentiator.
- **Joyalukkas' Price Scanner** — scan an in-store tag to pull the product up in-app — has no equivalent anywhere else in the set.
- **Multi-language support beyond one regional language** is rare — Malabar Gold and Bhima Gold are the only ones doing it properly.

Feature checklist, synthesized

- ☐ Home: live gold/silver rate (multi-karat, timestamped) + banner carousel + quick category icons
- ☐ Guest browsing by default; OTP login only required at checkout, not before
- ☐ PLP: real price + strikethrough MRP + discount %, quick add-to-cart, wishlist, filter/sort, delivery estimate
- ☐ PDP: price, product code, making-charge breakdown, Add to Cart *and* a Book Appointment / Video Call Store fallback for high-value pieces
- ☐ A gold-investment product — Digital Gold, savings scheme, or price-lock booking (start with Digital Gold — most "instant gratification")
- ☐ Store locator + Book a Visit (calendar-integrated) + Call Us, one tap from home
- ☐ WhatsApp/chat support as a persistent floating button
- ☐ At least two payment gateways for redundancy
- ☐ Avoid over-asking permissions — no background location, no contacts access without a concrete, explained feature

IV Full inventory

#	APP	LOGIN MODEL	PLP PRICING	CART MODEL	NOTABLE FEATURE
